Press Release

ESPION Introduces [MX]Lock Secure Email

Baton Rouge, LA. August 18, 2005 : ESPION International, Inc. [EPLJ.PK], the A.I. based email gateway and network security company, has announced the release of their new [MX]Lock secure email solution. [MX]Lock uses a 1024 bit strong dual-key system to encrypt email, and it meets stringent HIPAA requirements. “The beauty of [MX]Lock is that the solution itself is so powerful, yet user level set-up is kept to a minimum,” says Murali Chakravarthi, CTO of ESPION.

Unlike other solutions offered on the market, [MX]Lock uses a device license, and there are no per user or message fees. [MX] Lock is available as a module in the over 99% accurate ESPION Interceptor email security/anti-spam appliance, as well as in a stand-alone solution.

The ESPION development team in Baton Rouge, LA, is presently working on other predictive solutions using predictive A.I. technology to help monitor inbound and outbound content. This soon to be released technology will help companies comply with Sarbanes-Oxley Section 404 [SOX].

ESPION International, Inc. a Costa Mesa, CA. based company is the foremost in development and deployment of Artificial Intelligence based solutions for email gateway and network security. The current ESPION product range offers appliances for email gateway security, anti-spam and secure email.
